

ReGen: Cloud Continuity for PCs

Adaptable Capacity

Eliminate data loss and help your employees get back up and running quickly with Cloud Continuity for PCs. This reliable, image-based, all-in-one Business Continuity and Disaster Recovery (BCDR) solution provides backup direct to the Cloud, screenshot verification, and multiple layers of recovery capabilities including Bare Metal Restore, Rapid Rollback, and File/Folder Recovery. In the event of a lost or stolen PC, ransomware attack, or other disaster, MSPs can quickly and easily get their customer up and running, exactly as they had been before.

All-in-One BCDR for PCs

Whether it's because of a ransomware attack, lost or stolen device, or accidental deletion of a file, you can now confidently offer clients a solution not only for the protection of endpoint business data on their Windows 7 and Windows 10 devices, but also for streamlined recovery of the entire device configuration, setup and applications.

- Recover individual files and folders
- Rollback from ransomware attacks
- Restore lost or stolen PCs

Reliable PC Backups

PCs move between networks or get powered off, making it difficult to get reliable backups. Cloud Continuity for PCs backup automatically pauses when the device has its connection interrupted and then automatically resumes once the connection is restored. Integrity checks, like Screenshot Verification, validate every backup and provide an alert if there are any issues. This takes the guesswork out and ensures backups are good for a reliable recovery.

Simple Deployment and Management

The Cloud Continuity agent sits on the protected PC and connects directly to the Cloud without the need for a local appliance. MSPs can easily purchase, manage, and monitor Cloud Continuity for PCs in the Partner Portal. Here they can pause and delete agents and view recent screenshots, as well as perform bare metal restore, point-in-time rollback, and file/folder restore. Integration with RMM allows partners to save time and perform mass deployments easily and efficiently. Settings only need to be configured once per-client using RMM setup templates and a streamlined deployment workflow onboards new clients quickly.

ReGen: Cloud Continuity for PCs

Price, One Terabyte, Zero Complications

Cloud Continuity for PCs is designed to make it incredibly easy to resell and maintain consistent margins over time. For one simple price It protects the primary OS volume of an endpoint device up to 1 TB in size. No storage management is required, there are no surprise recovery charges, and backups are available with 1-year time-based retention (TBR) in the Cloud.

Protect Business Data No Matter Where It Lives

With Cloud Continuity, MSPs now have a powerful way to protect a broad range of PCs no matter where they operate from, opening up an even greater opportunity for partners to generate revenue while delivering the highest levels of business uptime.

Cloud Continuity for PCs

Key Features:

- Image-based Cloud BCDR
- Automatic backup pause and resume
- Screenshot Verification
- File Restore
- Bare Metal Restore (BMR)
- Point-in-time Rollback (Rapid Rollback)
- No additional appliance required
- No storage management required
- One price, no additional fees

Operating System and Hardware Compatibility:

- Supports Windows 10 (64-bit) and Windows 7 (64-bit)
- Requires 1 GB of free RAM on protected device
- Protects the primary OS volume (single-volume) up to 1 TB in size

About ReGen

ReGenerating Solutions (ReGen) has been providing technology solutions and services since 1983. ReGen is dedicated to offering quality technology solutions including Hardware and Network Design, Data Backup and Recovery, Dark Web Monitoring, Phishing Simulation Training, Phone systems as well as HelpDesk services.
